## DMC106H ELECTRICAL INTERCONNECT SYSTEMS INSTALLATION AND SUPPORT TOOL KIT

The Federal Aviation Authority has mandated that commercial air transport operators install Traffic Alert and Collision Avoidance Systems (TCAS) in their aircraft. The current schedule requires larger U.S. airlines to complete installation of TCAS II by the end of 1993, and other public transport aircraft to have the TCAS I in place by February 1995.

The complex power and telemetry circuits in this equipment utilize many connectors and termination devices that are not common to other areas of airframe electrical systems. To accommodate this problem, many specialized assembly tools are necessary to support this equipment.

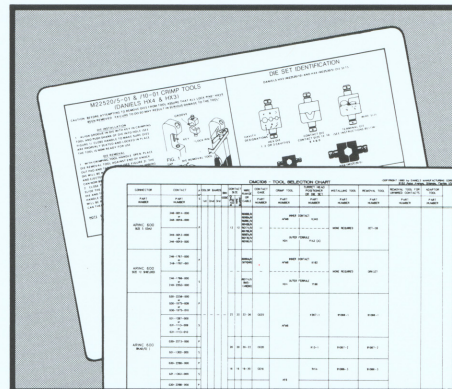

DMC, the world leader in wiring systems support, is continually

working towards the development of tool kits and support materials that are keeping pace with governmental regulations and airframe manufacturers.

In view of the TCAS mandate, DMC has developed a complete line of connector tool kits that will dramatically reduce the time and effort required to install TCAS units. This pertains to all power, coaxial, shielded and antenna systems. This full complement of tools is supported by all the cross reference, tool selection, instructional and reorder documentation required to make it a complete TCAS installation/support kit.

How does a TCAS wiring system support kit benefit the user?

- **Increases reliability**
- **Easy access to information**
- **Reduces tool loss and F.O.D.**
- **Reduces system down time**

### DMC106H TCAS Honeywell General Tool List

- 3 Crimping Tools
- 1 Turret
- 1 Single Position Head
- 4 Positioners
- 3 Die Sets
- 1 Metal Installing Tool
- 1 Metal Removal Tool
- 28 Plastic/Metal I/R Tools
- 1 Wire Cutter
- 1 9/64 Hex Wrench
- 1 Die Removal Tool
- 2 Wire Strippers
- 4 Coaxial Cable Strippers

The DMC106H is contained in a metal machinist-type chest with the following: foam pads and inserts, instruction sheets, contents charts, cover sheet and tool selection charts.
