

DMC1891 CONTACT RETENTION TEST Tool Kit

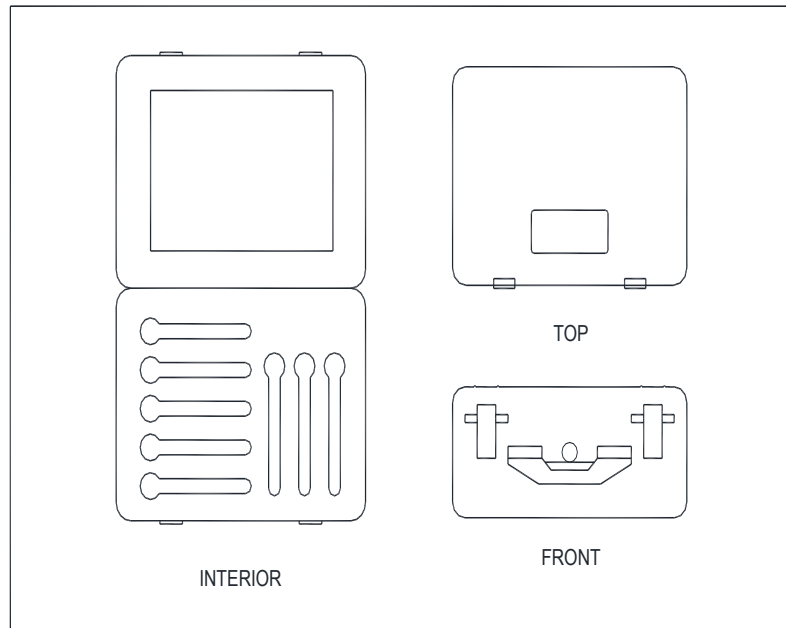

**DMC1891 Kit for
Contact Retention Testing**

The quality assurance test most often overlooked is contact retention (the proper seating of contacts within the connector). This important test can now be performed simply and in a matter of seconds with the **DMC1891 Retention Test Tool Kit**.

The DMC1891 Tool kit is supplied in 1 polyethylene, blow-molded carrying case and includes eight preset Contact Retention Tools. Four Tools for pins and four tools for sockets. Contact sizes covered are 22, 20, 16, 12.

NOTE: Retention test tools are to be used as a simple indicator to verify contact locking. Retention testing to MIL-STD-1344 (method 2007.1) will require different test equipment. For additional information, please consult DMC.
