

DMC216AF MAINTENANCE KIT

For Electrical Connectors and Wiring Systems

DMC216AF for the LOCKHEED FT WORTH F-16

THE MAINTENANCE PROBLEM...

Modern aircraft, such as the Lockheed F-16, have complicated electrical wiring systems containing many different connectors, contacts and terminals, the repair of which require precision tools.

It is not a cost effective use of the time of your technical staff to start from scratch and try to become intimately knowledgeable about which precision tools must be used to repair each electrical connector, contact and terminal when DMC has already performed this task for the F-16.

AOG TIME CONSTRAINTS.

Once the aircraft becomes inoperable because of a connector failure, it is imperative to be able to replace the connector, contact or terminal as quickly as possible to avoid loss of mission capability due to AOG. The DMC216AF kit supplies your staff with both the information and the tools necessary to make this type of repair to the F-16 in the shortest time possible.

THE DMC SOLUTION...

TOOLING RESEARCH.

DMC has already researched the list of connectors for the F-16 and has identified the most common tools required to maintain the electrical connectors in the F-16. DMC has cross referenced these tools to the connectors, contacts and terminals, eliminating costly and time-consuming research which would otherwise have to be performed by your electrical technicians.

IMMEDIATE AVAILABILITY OF TOOLS AND TECHNICAL INFORMATION.

The DMC216AF kit contains all of the tooling to connector, contact and terminal cross reference information needed to support the F-16. In addition, the DMC216AF kit also contains illustrated operating instructions for the required tooling.

ALL IN ONE. Since all of these tools, together with their operating instructions, are contained in a single kit, the connector repair can be made in the shortest time possible, thus permitting a rapid return of your F-16 to service.

Actual Kit may vary from example shown.
