DMC420A SEAHAWK MAINTENANCE KIT For Electrical Connectors and Wiring Systems

THE MAINTENANCE PROBLEM...

Modern aircraft, such as the Sikorsky Seahawk, have complicated electrical wiring systems containing many different connectors, contacts and terminals, the repair of which require precision tools.

It is not a cost effective use of the time of your technical staff to start from scratch and try to become intimately knowledgeable about which precision tools must be used to repair each electrical connector, contact and terminal when DMC has already performed this task for the Seahawk.

AOG TIME CONSTRAINTS. Once the aircraft becomes inoperable because of a connector failure, it is imperative to be able to replace the connector, contact or terminal as quickly as possible to avoid loss of mission capability due to AOG. The DMC420A kit supplies your staff with both the information and the tools necessary to make this type of repair to the Seahawk in the shortest time possible.

THE DMC SOLUTION...

TOOLING RESEARCH. DMC has already researched the list of connectors for the Seahawk and has identified the most common tools required to maintain the electrical connectors in the Seahawk.

Tool kit supplied in 2 environmentally sealed fiberglass cases and includes: Name Plate, Foam Pads/Inserts, and Contents Charts.
